

CONFÍO

Latin America's Trusted Digital Dollar Platform

Non-custodial · Fully open-source · Built on BNB Smart Chain · Local rails in 7 countries

Lo tuyo, tuyo.

Julian Moon · Founder & CEO · July 2026 · confio.lat · github.com/caesar4321/Confio

Latin America pays a daily tax: distrust.

Frozen savings

Banks and governments have frozen and converted deposits before. People remember — and keep dollars in cash.

Melting money

Inflation and devaluation quietly confiscate salaries and savings held in local currency.

Costly middlemen

Informal brokers, hidden spreads and slow remittance rails take a cut of every dollar a family moves.

Falta de confianza is not a side effect of the problem. It is the problem — and the product opportunity.

One network. One balance that does everything.

cUSD+ — the working dollar

Primary savings & transaction balance

- Backed by USDY — tokenized US Treasuries (Ondo)
- Yield accrues daily; 85% of yield to holders
- Save, send, spend, and run payroll — one balance
- Redeemable to USDT from day one

USDT

Universal in & out rail

- Local fiat providers deliver BSC-USDT to the user's own address
- Exit rail: any balance redeems to USDT atomically
- Recipients outside cUSD+ eligibility automatically receive USDT
- Plus: Ondo Stocks in-app for eligible users — same network

Non-custodial at the key layer: users hold their own keys. Not even Confío can freeze or move a wallet.

HOW IT WORKS

Web2 on the surface. Self-custody underneath.

Familiar sign-in

Google or Apple login. Keys generated on-device, encrypted to the user's own Google Drive / iCloud. No seed phrases.

Invisible gas

Every network fee is sponsored. Users transact in dollars — they never see a chain, a token symbol, or a gas prompt.

Local money in & out

Alias/CVU (AR) · SPEI (MX) · interoperable QR (PE, BO) · bank transfer (CL) · PSE/Nequi (CO) · PIX (BR) — via licensed partners (Koywe), plus SEPA & USD cards globally (Guardarian).

One network, no bridges: funding, savings, payments, payroll, tokenized assets and \$CONFIO share one address and one sponsored-gas system — all of it MIT open source.

The rails just changed.

Dollars are on-chain

Stablecoins settled more volume last year than Visa and Mastercard combined — and over half of crypto purchases in major LATAM markets are stablecoins.

Treasuries are on-chain

Tokenized US Treasury products (USDY) make institutional-grade dollar yield deliverable inside a consumer app.

The category is proven

Exchanges, fintechs and creators are all converging on the on-chain consumer finance app. The winners will combine distribution and trust — not outspend on cashback.

Confío enters the race with both distribution and trust already built.

Latin America already thinks in dollars.

US\$173.7B

in remittances to Latin America & the Caribbean in 2025 — a record 16th consecutive year of growth (IDB)

US\$62.5B

flowed to Mexico alone in 2025 — the region's largest corridor

US\$38B+

sits in USD deposits in Peru's banks, earning near zero — savers who already think in dollars, waiting for a better rail

The wedge: dollar savers and remittance families underserved by banks — reached through a channel competitors can't buy.

Shipped by one founder. Growing without ads.

Product

Seven contracts live & source-verified on BNB Smart Chain mainnet — cUSD+ vault, sponsored-tx delegate, \$CONFIO token, presale & reward vaults, merchant-payment and payroll contracts — wired into the production app

Partnerships

Ondo USDY agreement signed; vault registered on Ondo's permissioned infrastructure · Koywe live in 7 countries · Guardarian (SEPA + cards)

Validation

Algorand Foundation direct grant received (\$25K, KYB-verified) · full stack MIT open source, ~2,000 commits

Revenue scales with savings — not with extraction.

0%

Person-to-person transfers

Network fees sponsored by Confío

0.9%

Merchant payments & payroll

Flat, transparent business-side pricing

85 / 15

cUSD+ yield split

85% to holders, 15% to Confío — enforced in the open-source vault contract, not a footnote

0.30%

Ondo Stocks transactions

Explicit Confío fee per purchase and sale, separate from Ondo's execution quote

Plus on/off-ramp revenue share (Guardarian). Income scales with users keeping and growing their dollars.

Trust is the distribution channel.

Every competitor buys users with cashback and burn. Confío's users arrive through a founder they already trust — a Korean creator who has lived across Latin America for five years, documenting the build to $\approx 480,000$ Spanish-speaking followers, every week.

COMPETITION

Everyone converges on this category. Nobody starts where we start.

US → LATAM corridor neobanks

DolarApp, Takenos, Meru — strong UX, but custodial, bank-dependent, corridor-anchored

Exchanges & P2P markets

Deep liquidity, built for traders — order books and cognitive load, not families

Self-custody wallets

Real control, unusable UX — seed phrases, gas, hex addresses

Confío

LATAM-native · non-custodial Web2 UX · founder-led distribution · fully open source · everything on one network: BNB Smart Chain

Nubank builds a bank people can trust. Confío builds trust that doesn't need a bank.

Capital-efficient by construction.

Julian Moon — Founder & CEO

- Five years living across Latin America; builds in public to ≈480K Spanish-speaking followers
- Designed and shipped the entire stack solo — mobile app, backend, and smart contracts on two chains (~2,000 commits, MIT)
- KYB-vetted by the Algorand Foundation (direct grant) and Ondo Finance (USDY distribution agreement)

Susy — Content & Community

Guatemala-based; runs clip editing and cross-platform distribution of founder content across the region.

What funded teams promise in roadmaps, this team has already shipped to mainnet.

The next twelve months.

Launch

cUSD+ and in-app Ondo Stocks public activation — contracts live and registered, staged rollout in progress

Grow

Convert founder distribution into funded, retained savers — measured as funded users, TVL, and country cohorts

Expand

Interoperable QR payments and third-party deposit/collection rails across LATAM

Deepen

BNB Chain ecosystem integration: open-source EVM wallet, sponsored-gas and RWA-savings infrastructure other builders can reuse

Lo tuyo, tuyo.
